

Are your patients going around in circles trying to find their way?

This is only one result of a poorly designed wayfinding system. Ineffective signage programs also leave the burden on your staff to give patients directions, using valuable man-hours, when they could be saving lives. So don't let your patients get so frustrated that they won't return to your facility.

The Design Office of Steve Neumann & Friends

approaches each signage program as a problem unique unto itself. The resulting solutions reflect input from all parties: Client, Architect, Graphic Designer and End User. The result being a wayfinding program which solves the user's visual communication and wayfinding problems.

An effective signage and wayfinding program requires experience in the two-dimensional field of graphic design, marketing and design communication arts together with an understanding of three-dimensional architecture to develop environmental signage wayshowing systems that will stand the test of time (both aesthetically and physically).

Our design solutions reflect over 44+ years of practical experience and commitment while partnering with nationally recognized healthcare facilities.
