

**You have a signage
program already
installed in your facility ...**

**Are you letting your patients and guests
FIND their way around, or should you SHOW
them the way?**

The Design Office of Steve Neumann & Friends approaches each signage program as a problem unique unto itself. The resulting solutions reflect input from all parties: Client, Architect, Graphic Designer and End User. The result being a wayfinding program which solves the user's visual communication and wayfinding problems.

An effective signage and wayfinding program requires experience in the two-dimensional field of graphic design, marketing and design communication arts together with an understanding of three-dimensional architecture to develop environmental signage wayshowing systems that will stand the test of time (both aesthetically and physically).

Our design solutions reflect over 43+ years of practical experience and commitment while partnering with nationally recognized healthcare facilities.

Allow us to show you the right way.
